

Roundabout lane markings and hatching.

The drawing shows a technical plan view of a road intersection. On the left, a roundabout is depicted with multiple lanes, each marked with a series of triangles pointing towards the center. A road extends from the roundabout towards the right. This road features a central hatched area, represented by a series of parallel diagonal lines, which narrows the running lanes on both sides. A rectangular building footprint is shown to the right of the road extension. The drawing uses various line styles to represent lane boundaries, hatching, and other road features.

TH-EXT-0047-005

Central hatched area narrowing running lanes either side to 2.8m.
